

.excludeFromAutoResolve

This file tells Copado's conflict resolution engine to skip auto-resolving conflicts for the specified files or file types.

Conflicts in these files will require manual resolution.

Exclude all Profiles (Highly recommended as auto-merging profiles often corrupts the XML)

.profile-meta.xml

force-app/main/default/profiles/

Exclude all Permission Sets

.permissionset-meta.xml

force-app/main/default/permissionsets/

Exclude Page Layouts (Layout XMLs are complex and prone to auto-merge errors)

.layout-meta.xml

force-app/main/default/layouts/

Exclude Custom Labels (To prevent accidental overwrites of label translations)

.labels-meta.xml

force-app/main/default/labels/

Exclude Translations

.translation-meta.xml

force-app/main/default/translations/

Exclude specific project configuration files

sfdx-project.json

package.xml

Example of excluding a specific file by exact path:

force-app/main/default/classes/MyHighlySensitiveClass.cls
